

Glycine is a non-essential amino acid and has one of the simplest structure of all amino acids, allowing it to fit easily within protein chains and make space for structurally larger amino acids. This feature makes it very important for specific bodily functions. Glycine is also a precursor of creatine, which is used to construct DNA and RNA. The amino acid Glycine is non-chiral and only has one form without a D- or L- designation.† Certain research publications indicate that Glycine may help support the following:

- Supports healthy immune system.†
- Supports energy production.†
- Supports healthy nervous system.†

SUGGESTED USE: As a dietary supplement, take one (1) capsule one to three times daily.

Keep out of the reach of children.

Do not use if safety seal is broken or missing.

Keep in cool, dry place.
