

**Suggested Usage:** Take 1 capsule 1 to 3 times daily, preferably between meals.

Glutamine is considered to be a conditionally essential amino acid, which means that under certain circumstances, the body may require more glutamine than it can produce. In the body, glutamine functions as a major nitrogen transporter and is critical for the maintenance of healthy nitrogen balance.\* Glutamine also acts as the primary fuel for the rapidly growing cells of the immune system and GI tract.\*
